# Setting .net framework path in Environment variable
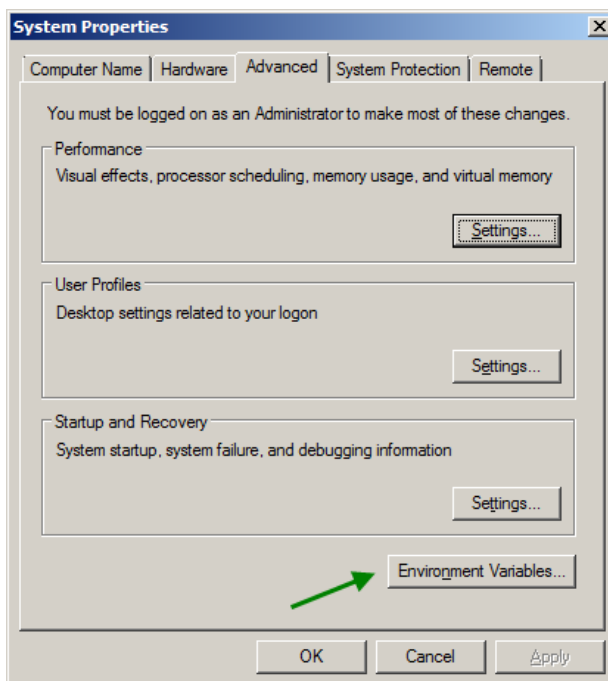

Step 1: Right click on Computer and click on Properties

Step 2: Click on Advanced system settings

Step3: Click the 'Environment Variables…' button

**Rexroth**
Bosch Group

Step 4: Select System variable 'Path' as shown in the below dialog and click Edit button

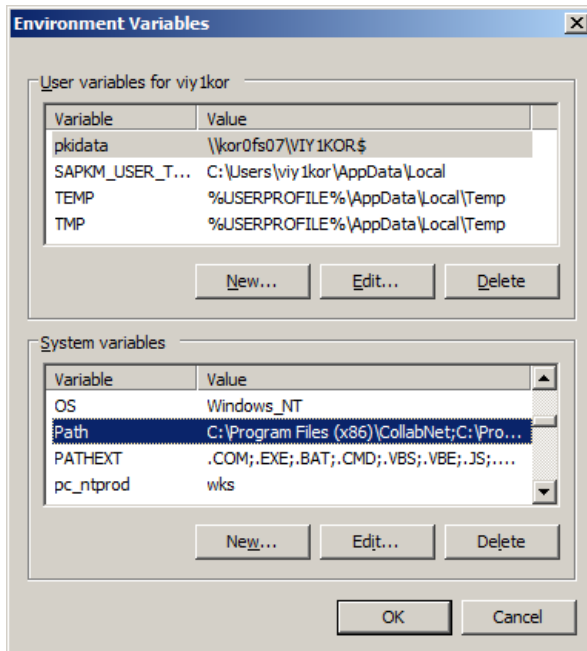

Step 5: Copy the Microsoft .net folder path from installed location
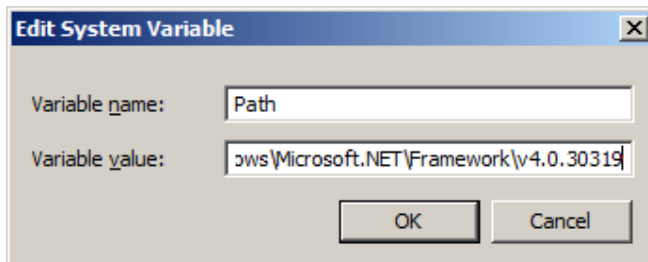

Ex:

C:\Windows\Microsoft.NET\Framework\v4.0.30319

Step 6: Write ';' at the end of the value and also Paste the copied path and click OK.

Note: Please check, whether the path is already present in the value.
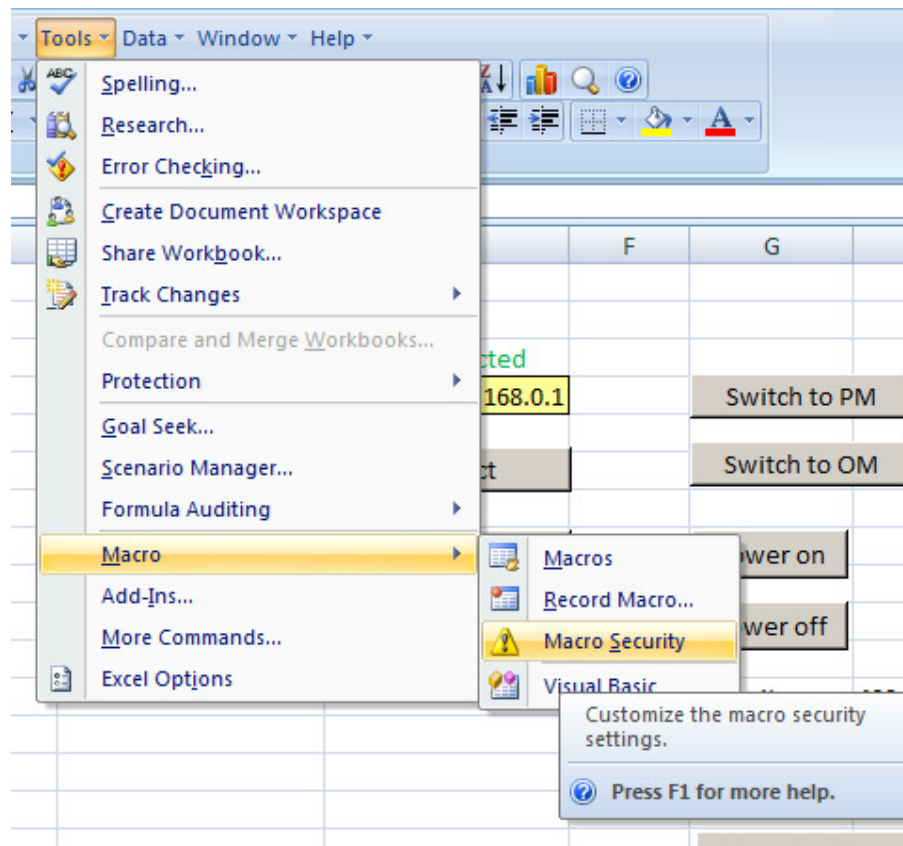

## Registering EAL.dll
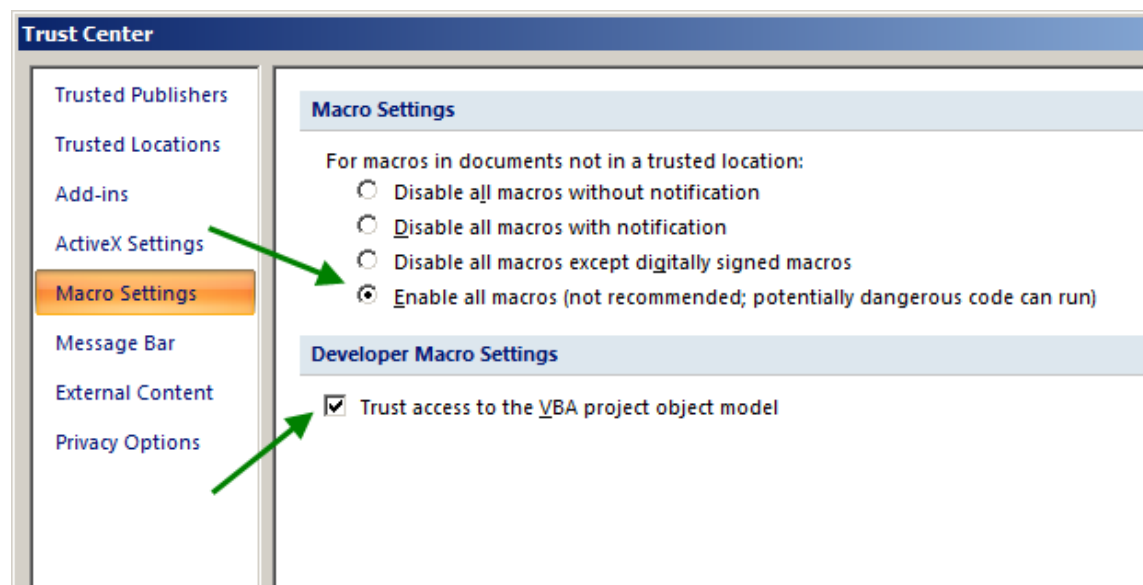

Step 1:

Unzip the EALExcelSample.zip file.

Step 2:

Execute the batch file 'Register.bat' as admin.
